High Level Architecture Model

Current High-Level Architecture

Architecture Statement

The web shop sells products, while D365 manages license and access. The azure platform identifies users and checks eligibility through Azure platform which provides flexibility for day one model, and future licensing model changes with centralised reporting available through D365 / Dataverse that can be extended into future AI / BI capabilities both on front end and back-end systems

AMH Medicines, AMH Children's Dosing, AMH Aged Care

A new look. The same trusted information.

- The information will remain evidence-based, independent and practical
- The content is being moved to a new authoring and publishing system (Quark Publishing Platform) to transform it from static content to data. The editorial publications team will be able to:
    - Streamline the editorial process
    - Re-use content, both within and across our publications
    - Integrate the content with other systems, eg AMT
    - Change the focus to digital-first, with more frequent digital updates

AMH Medicines, AMH Children's Dosing, AMH Aged Care

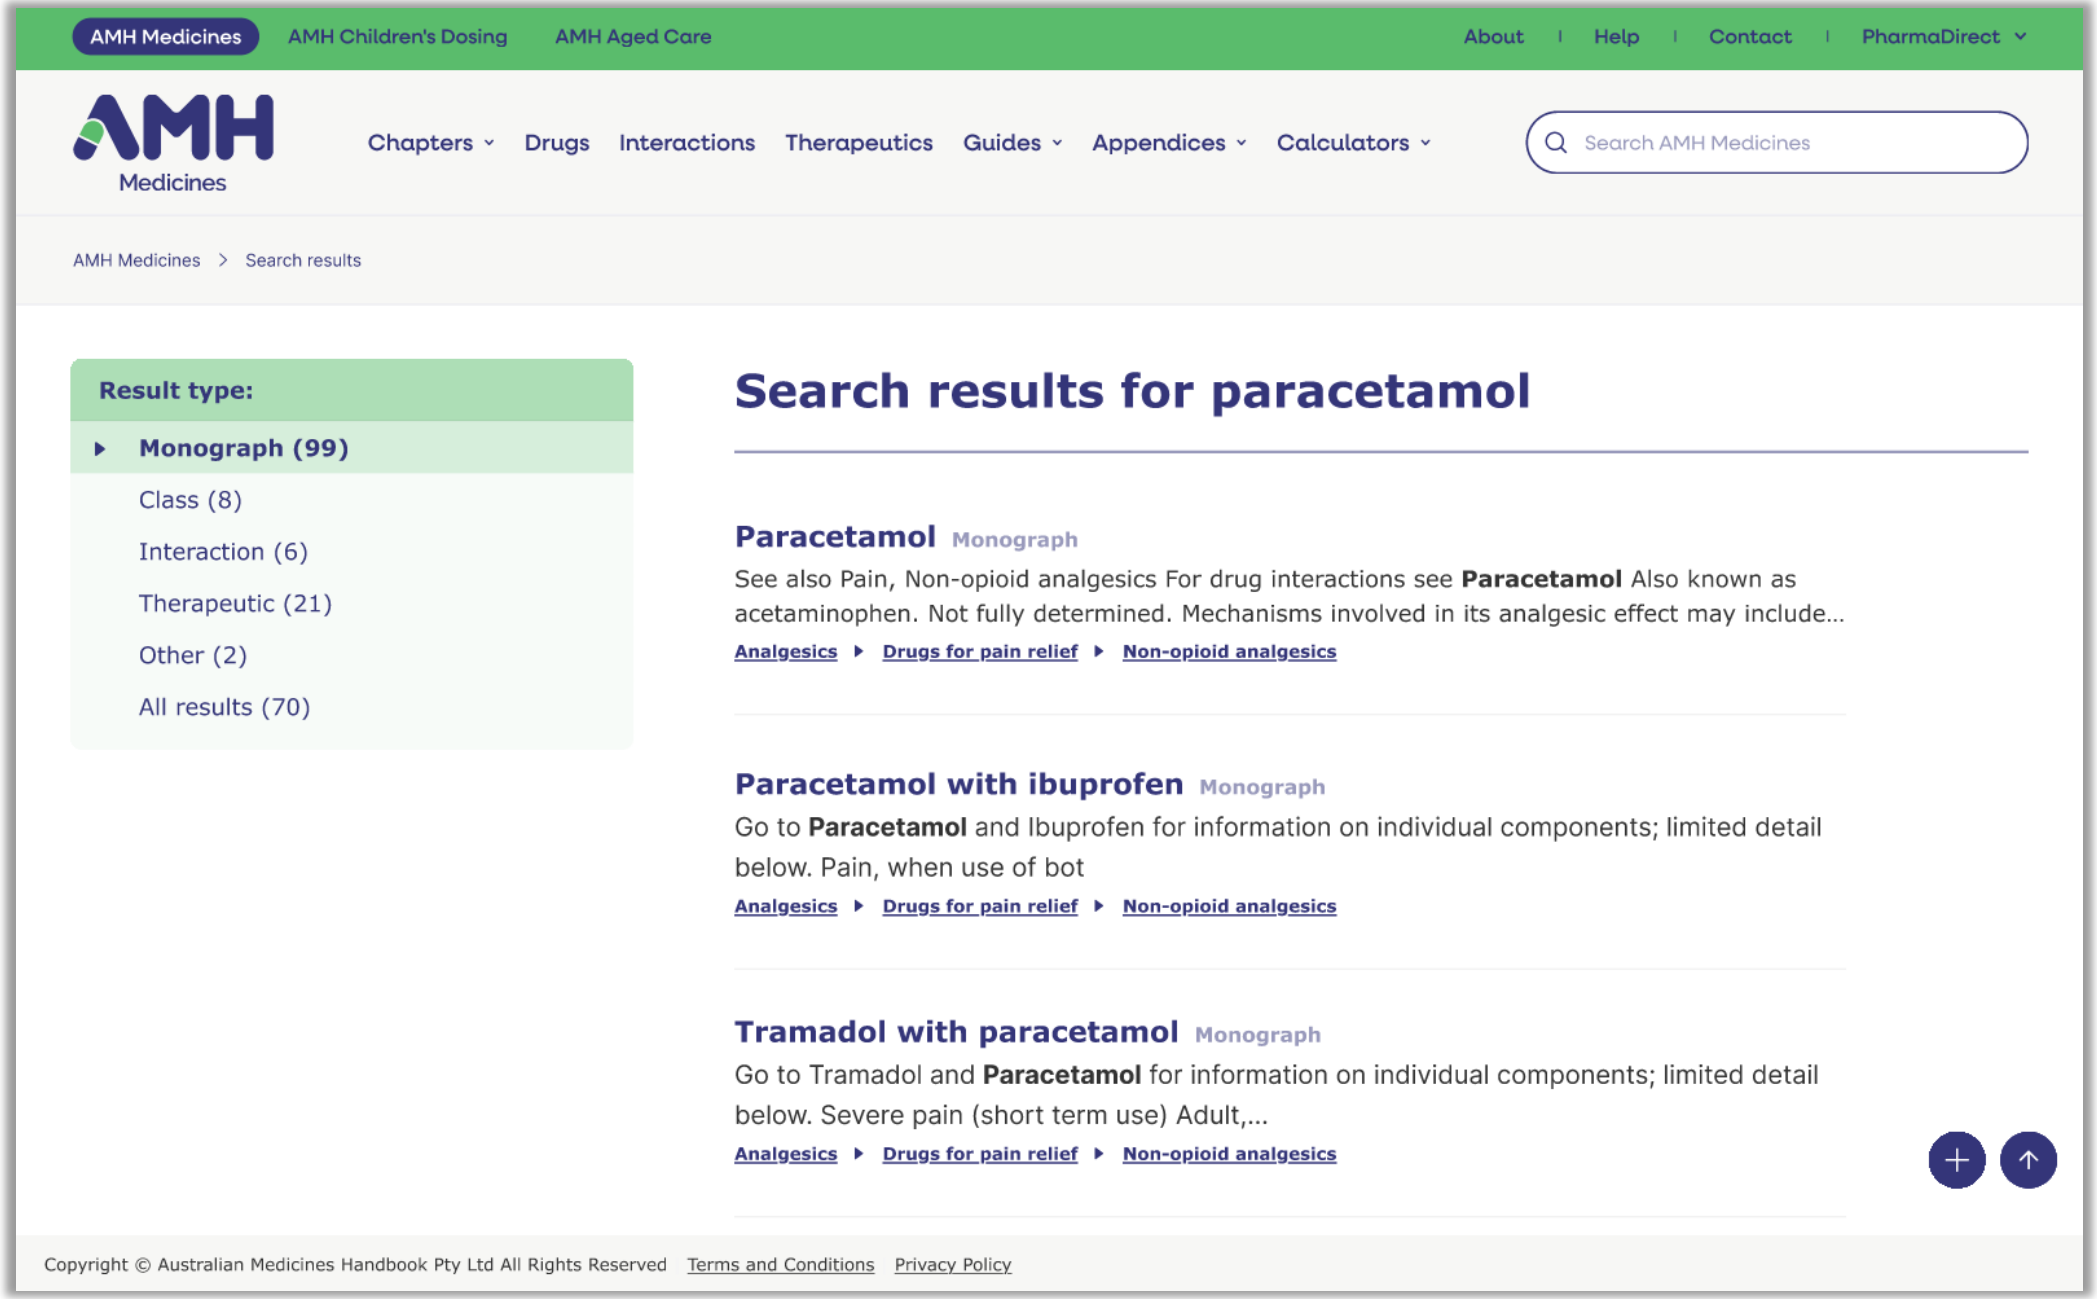

A new look. The same trusted information.

- The digital platforms will have an updated look, but the core functionality will be retained:
    - Search – a full text search and improved top matches for key terms
    - A to Z lists
    - Browse by chapters
    - Calculators
    - Tables
- Further improvements will be made gradually, with user's input
- Designs for digital platforms are finalised and development of the digital platforms has begun. Here's a sneak preview...

Day 1

Confidence in clinical care.

What to expect on launch:

- Improved search
- Ease of use
- Greater stability and speed on a web application
- Same structure that clinicians were taught for the past 28 years
- Same trusted, evidence-based information

Beyond Day 1

A Knowledge Service

While the launch plan is to offer users familiar structures and presentation, our move to a component content management system allows for future services direct to third-party platforms:

- API creation to match partner needs
- Interoperability built in from day one – including SNOMED-AMT mapping and FIHR Standards

Ability to create new products from existing content more quickly – such as educational guides

Opens possibilities to co-design with long-term partners
